SE Crypto Bot

Real-time Cryptocurrency Information via Telegram

Author: Arseniy Kosishnov — a.kosishnov@innopolis.university

Made with GAMMA

Problem & Solution

End-Users

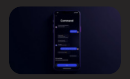
Cryptocurrency traders and enthusiasts who need fast, consolidated market data.

Problem

Market information is fragmented across CoinGecko, Binance, Alternative.me and more — costing time and attention.

Solution

A Telegram bot that aggregates essential market data into one fast, chat-driven interface.



Core Feature

Simple commands to fetch prices, market trends and sentiment — instant, contextual, and shareable.

Made with GAMMA

Technical Implementation

1

Backend

FastAPI (Python) powering REST endpoints and data aggregation.

2

Database

SQLite with SQLAlchemy ORM for lightweight user tracking and caching.

3

Client

Telegram Bot implemented with python-telegram-bot library.

4

Data Sources

CoinGecko, Binance, Alternative.me for price, market and sentiment data.

5

Deployment

Containerised with Docker for reproducible deployments on VMs and cloud.

Roadmap & Versions

- **Version 1**: Basic price commands, user DB, stable REST integration.
- **Version 2**: Advanced analytics — long/short ratios, trending coins, enhanced market sentiment.

Design choices favour minimal latency, low-cost persistence, and modular connectors so new data sources or features can be added with minimal effort.
